

Unlocking Oral Wellness: Exploring Ultrasonics in Periodontal Therapy

Patients today seek painless and effective oral therapy from oral health professionals who exhibit clinical mastery and employ cutting-edge systems. Ultrasonic treatment represents a revolutionary leap forward, elevating dental care to new heights of excellence in non-surgical periodontal therapy. This course aims to empower participants with the knowledge and skills necessary to leverage innovative ultrasonic technology for optimal patient outcomes.

Drawing upon the speakers' firsthand experiences and scientific research, this course will challenge and inspire participants to embrace ultrasonic technology as a cornerstone of modern periodontal therapy. Through examples and data, attendees will gain insights into the transformative benefits of ultrasonics for both patients and providers. By exploring the efficacy of ultrasonic therapy and its role in preferred non-surgical periodontal treatments, participants will be equipped to deliver superior care and enhance their professional competence.

Sherry Priebe
DHP, BDS, MSc

Learning Objectives:

- ✓ Articulate the advantages of ultrasonic technology for both patients and providers
- ✓ Demonstrate enhanced proficiency and confidence in utilizing ultrasonic systems
- ✓ Analyze the outcomes of ultrasonic therapy and its place in non-surgical periodontal treatment protocols.
- ✓ Develop a personalized professional development plan to deepen understanding and application of periodontal therapy techniques

“I found the speaker maintained my interest throughout the entire presentation. Well presented and good flow of material. Profound message.”

SUGGESTED ATTENDEES:
Dental Hygienist, Dentist

SUGGESTED FORMAT:
Half Day; Lecture, Workshop, Keynote
